

INPUTS

Legal, human, material, scientific and financial inputs

This diagram shows the logical sequence for HR interventions. The links between the boxes indicate presumed causal links. Reading the diagram from left to right (If...Then) => the evaluator considers the "cause and effect" relationships (forward planning stage). Reading the diagram from right to left (How and why) => The evaluator seeks to understand how the effects were obtained, or via which interventions he reached the desired objectives (the retrospective stage). The various boxes and sequences may give rise to specific evaluation questions. When they concern an evaluation, each box should be accompanied by one or several indicators.
